Hi, Stacey

Attached is the revised letter. I added more information as to why the data was unacceptable.

Thanks Jacquie!

Please take a look at the attached draft tech screen failure letter and let me know if it's okay to send to the registrant.

Good morning, Stacey

You should draft the 10 day technical screen failure letter, then send it to Jennifer. Reckitt has 10 days to fix the failure or the PRIA gets kicked out. There isn't a need to renegotiate.

The AWWPA manual is on my desk. The internal meeting is a listening session where Rose/Anita will more than likely give their thoughts based on the meeting w/ Pat Quin and Seth Goldberg.
I'll be in the office tomorrow if you want to set up a meeting to discuss expectations of the Use Table Index.

Good morning Jacquie,

I am reaching out to Jennifer this morning regarding the tech screen failure. I'll ask her if she thinks this can be addressed in time such that it would not impact the Agency due date of 1/23/19, or if we should consider renegotiating.

Also, I was going to set up a quick meeting to discuss expectations of the Use Table Index for the wood preservation uses. Do you have the current AWP manual that I could look over?

Thanks!

From a chemistry point of view, the technical screen for 777-RGL_D448735_Everclean failed for not presenting the 830.1800 Enforcement Analytical Method guideline.

It is noted: Studies contain attachments, which cannot be opened and cannot be viewed. Registrant should resubmit studies and make the attachments viewable.
